

Dundrum Electoral Area – Tree Care Programme 2024/25

The Tree Care Programme pertaining to the Dundrum Area Committee is outlined below in two tables. The Remedial Tree Works is listed in Table 1 and the Tree Planting is listed in Table 2. All requests to date have been included.

In relation to Table 1: Remedial Tree Works pertaining to 1,805, (252 are removals), some of the tree works has been completed, a large portion has been awarded to a contractor who is scheduled to start on site shortly, some of these works are currently out to tender currently and the our staff are working on a portion also.

The planting of 2,606 new trees (Table 2) will commence later this month and will be completed by end of March/early April 2025 as part of the tree care programme – these trees range from small to standard and specimen trees.

We have included new tree planting with the new playgrounds being developed, in our parks and open spaces and also on roadside trees to maintain and increase the overall tree canopy in the county.

We are planning to create two additional community woodland schemes in Belarmine (500 trees approx.) and Lakelands (500 trees approx.)

We will continue to place label on the newly planted street trees to encourage the community to assist with watering the trees outside their homes which is essential to maximise the survival rates of these trees.

We will continue to work towards meeting the objectives set out in the dlr Tree Strategy 2024-2030 A Climate for Trees, this will assist us “to manage and develop our urban forest together for community well-being and climate resilience.” The urban forest must be sustainable and climate resistant and we need to work in partnership with the communities to ensure this is achieved. The annual work included in the Tree Care Programme significantly contributes to realising this vision.

Work is also ongoing on communicating the benefits of trees to the public through the Tree Tag Project where evaluations of particular important trees in parks and in the wider community are carried out and information signs attached to these tree indicating amount of carbon sequestered, amount of oxygen produced and water stored.

Table 1: Remedial Tree Works

Location	Quantity	Work to be carried out
